Checkpoint 17 Marcel 12-06-2024

Preslavski, Kaloyan K.S. 7 days ago

We discussed the current stage of the deliverables. I still have a few things to work on: the GDPR part and cloud deployment. Together with that I found out that a frontend should be made for the demo. The plan is to start with GDPR and to take not more than a day. After that focus on the cloud deployment and frontend.

Boelaars, Marcel M.M.H. (Teacher) 20 days ago

I can see you making progress. You are now asking more and more feedback to see where you stand, and you definitely try to turn things around. Still a bit behind, but catching up.

Your reflection on the database situation is a good step.

Checkpoint 13 Marcel 22-05-2024 🔒

Preslavski, Kaloyan K.S. 25 days ago

Discussed my progress, mainly regarding Kubernetes. I managed to move from Docker-Compose to Kubernetes using Kompose to convert the dockercompose file to Kubernetes yaml files.

Next steps include integrating API Gateway and Security. After that is the monitoring and planning for the cloud (what needs to be in the cloud and why).

Checkpoint 12 Marcel 15-05-2024

Preslavski, Kaloyan K.S. a month ago

Showed my take on integration tests, however the separation of concerns was missing, since I made everything in the pipeline. to fix this I should use a script or something similar that will run the test in the pipeline.

Next steps are fixing the integration test and start working on kubernetes.

Checkpoint 9 Qin/Marcel 22-04-2024 🔓 🛕

Preslavski, Kaloyan K.S. 2 months ago

Had individual talk with Marcel regarding my lack of initiative and progress. Showed more progress than what is in the portfolio, however, I am still running behind with the project. We talked about what the next steps are if I want to pass this semester. We agreed to have weekly meetings where Marcel is going to help me by tracking my progress more closely and pointing out mistakes/giving feedback on time, because I have no time to lose.

At the time of the meeting with Marcel I had the two databases ready (PostrgeSQL and Cassandra), both services and message broker working in a docker compose. He suggested that my next step is testing.

As of the time of writing this report (25.04.2024), I have unit tests, integration tests, as well as SonarCloud code quality and coverage in the pipeline. I have taken security measures in the pipeline, as I am using repository secrets in my GitHub Actions workflow.

Currently my next steps are to document the process I went through to set up Docker Compose, Pipeline and SonarCloud. As well as that I should update the SpringBoot reasoning document and write one for the reasoning to use different DBs (PostgreSQL and Cassandra).

Checkpoint 8 w8-Marcel&Qin 08-04-2024 🔓

Preslavski, Kaloyan K.S. 2 months ago

Started working on integration of SonarQube and encountered several technical issues. What I will start doing after fixing them is the containerization, which will help with integration testing later.

Checkpoint 7 Marcel 03-04-2024

Preslavski, Kaloyan K.S. 2 months ago

Showed initial feature. At the moment it was reversed, however, the sequence diagram is correct. Now the feature is fixed and I am starting with the pipeline.

Checkpoint 5 wk 4 (Marcel) 13-03-2024 ■

Preslavski, Kaloyan K.S. 3 months ago

Took a look at my C2 diagram, which needs revision. Authentication and authorization need to be rethought, because the diagram is unclear on how it fits into the application. I should think about whether to use external service for the authentication or no. Next, I need to start work on walking skeleton (2 services and messaging queue)

Checkpoint 4 w4 (Qin & Marcel) 11-03-2024 🔒

Preslavski, Kaloyan K.S. 3 months ago

I need to catch up on the project, as I still lack the architecture diagrams for each component. I wasted some time on an incorrect approach, so now I have to create the diagrams and then decide on the tech stack and the other aspects of the application.

Checkpoint 3 w3 second meeting 07-03-2024 ■

Preslavski, Kaloyan K.S. 3 months ago

I showed my progress regarding the documentation. This included the project plan and initial version of design document. Some improvement points are the actors in the user stories, the lack of different user roles. Some of the NFRs need modifying and I should come up with a number of an example requests per second and the delay/latency of the application.

Next up is the research of the tech stack and breakdown of the application into microservices.

Checkpoint 2 week 2-Qin 26-02-2024

Preslavski, Kaloyan K.S. 4 months ago

I showed the progress on the project plan and so far it is okay. I am planning on starting a design document and then a walking skeleton.

Checkpoint 1 individual prioject idea 22-02-2024 🔒

Colaborative movie choosing application

- Good project choice
- Think about the scalability
- Think about the data management
- More appealing to Qin

Car parts marketplace

- Also a good project, but less interesting idea

Project plan

- functional requirements
- non-functional requirements
- user stories

In the end I decided to go with the colaborative movie choosing application and have started working on the project plan
